Air Heater Unit LW

for medium pump circulated water PWW

The formula for calculation of heating performance [kW] of air heater is dependant on air flow volume and the air temperature difference (between air on-coil and air off-coil, to be taken out of following diagrams) is as follows:

$$\dot{Q}_h [\text{kW}] = \dot{V}_L / 3600 \times (t_{LA} - t_{LE}) \times \rho_L \times cp_L$$

\dot{Q}_h = heating performance [kW]

\dot{V}_L = air flow volume [m³/h]

t_{LA} = air temperature off-coil [°C]

t_{LE} = air temperature on-coil [°C]

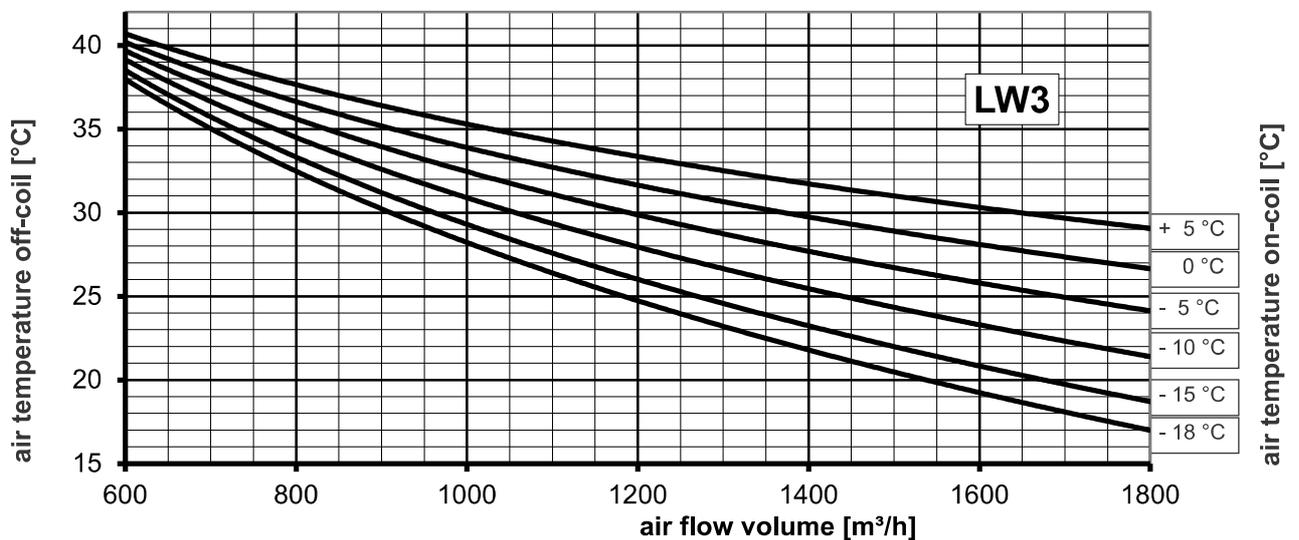

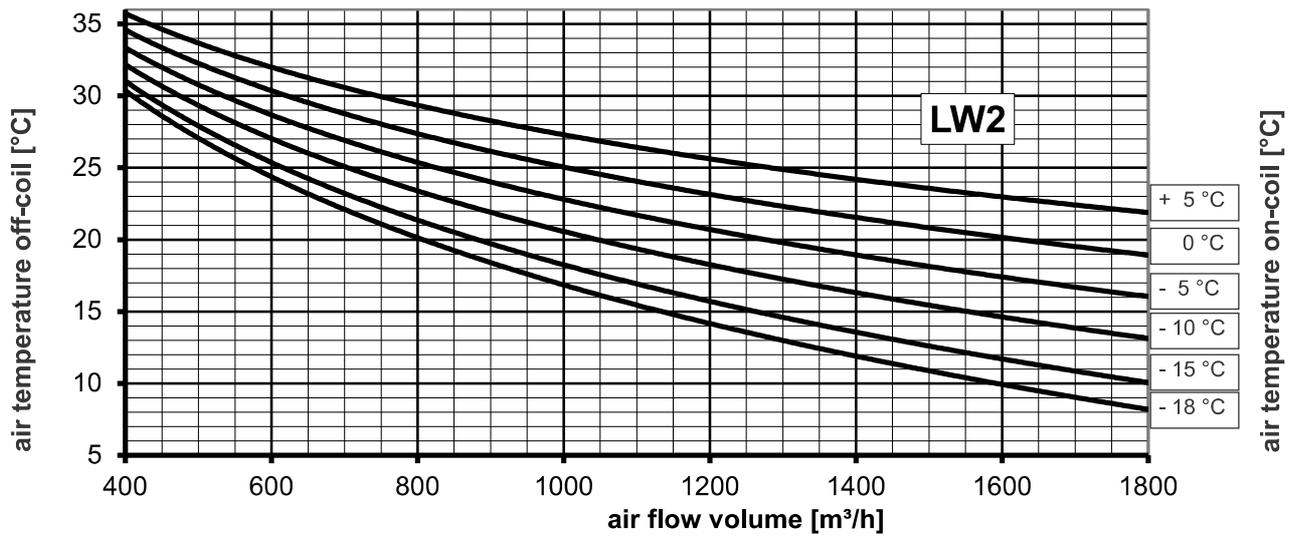

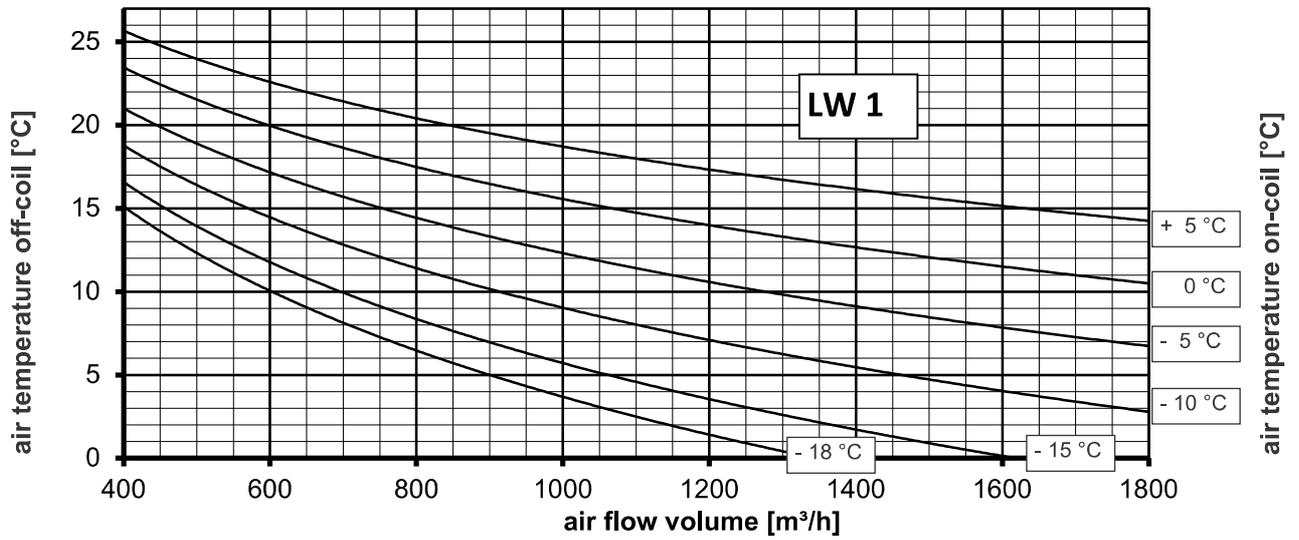

ρ_L = specific weight of air = 1,2 [kg/m³]

cp = specific heat capacity of air = 1,0 [kJ/kg K]

Flat Series
Size: 2

Air Heater Unit LW
 for medium pump circulated water

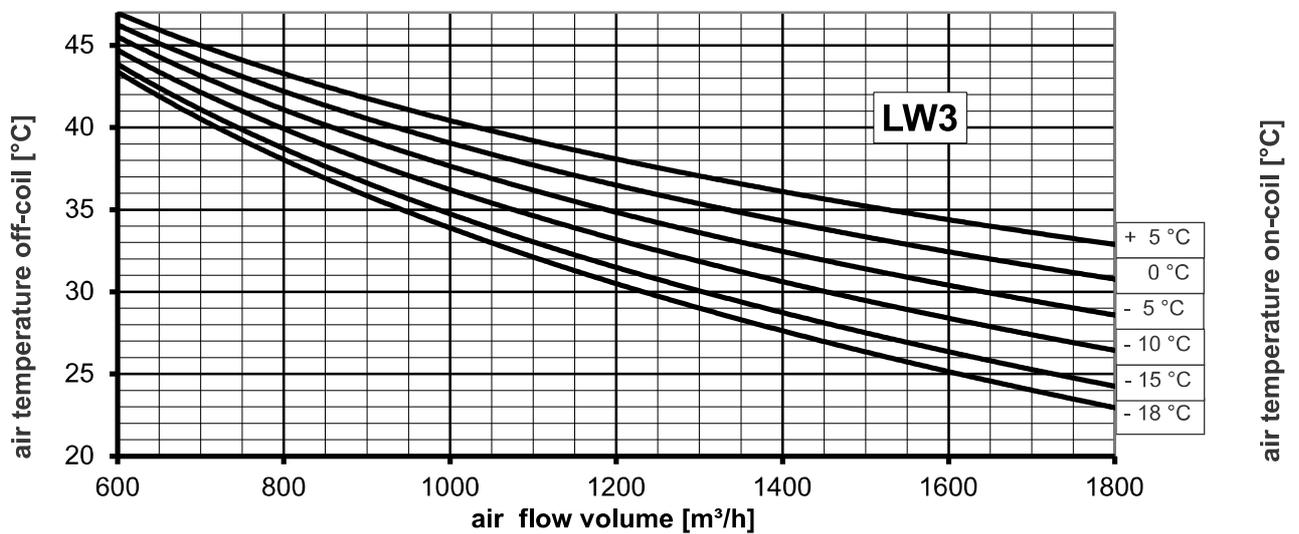

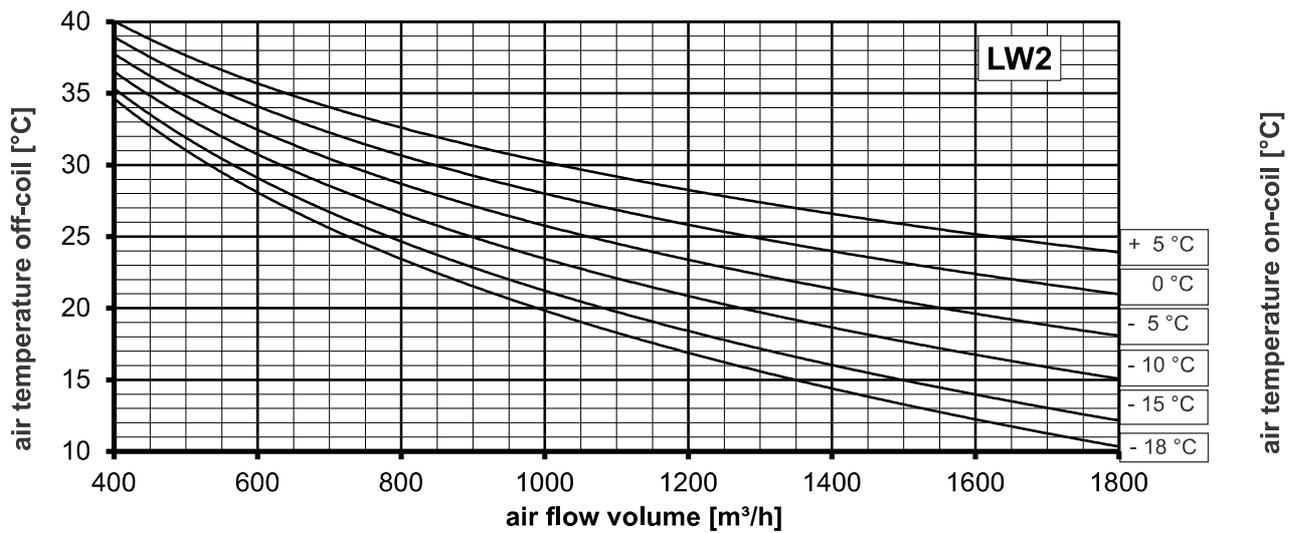

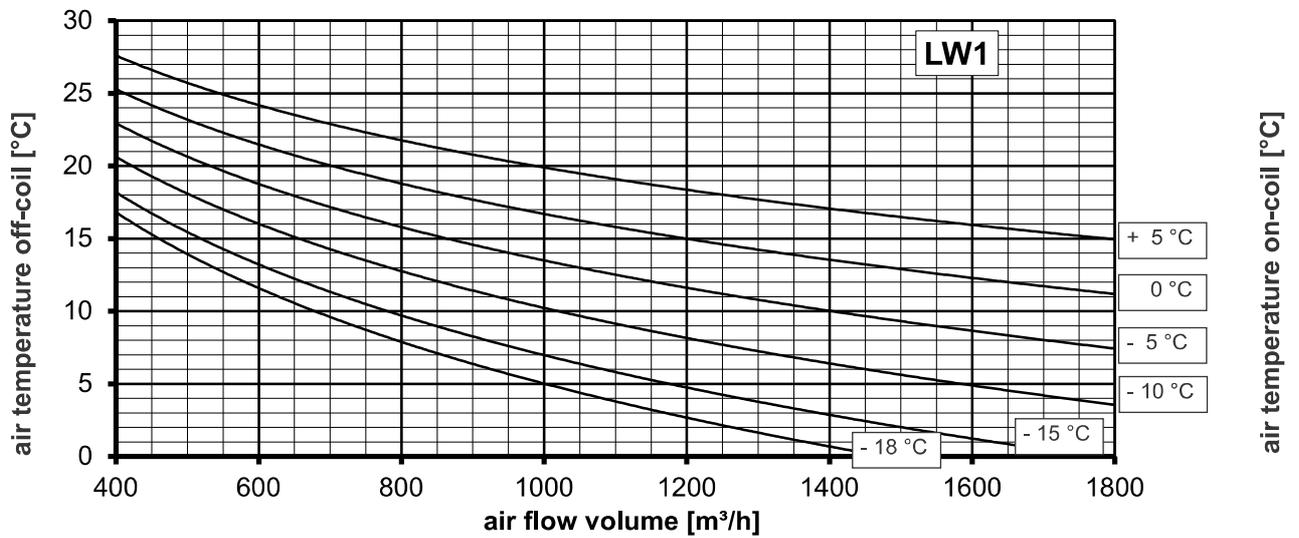

Heating performance for water temperature on-/off-coil 55/45°C

Flat Series
Size: 2

Air Heater Unit LW
 for medium pump circulated water

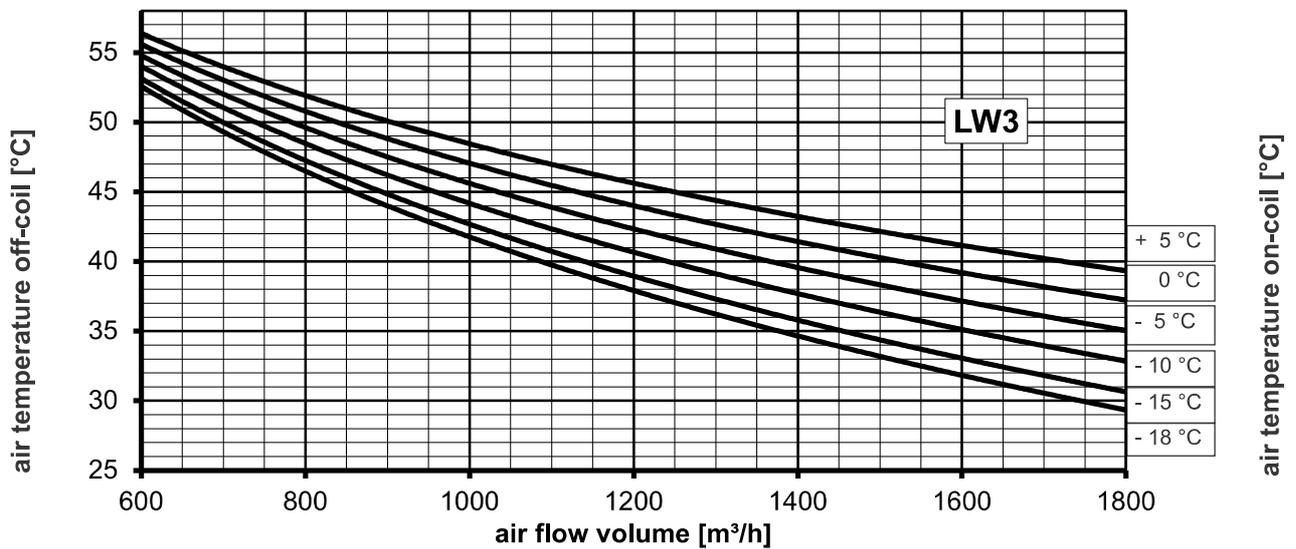

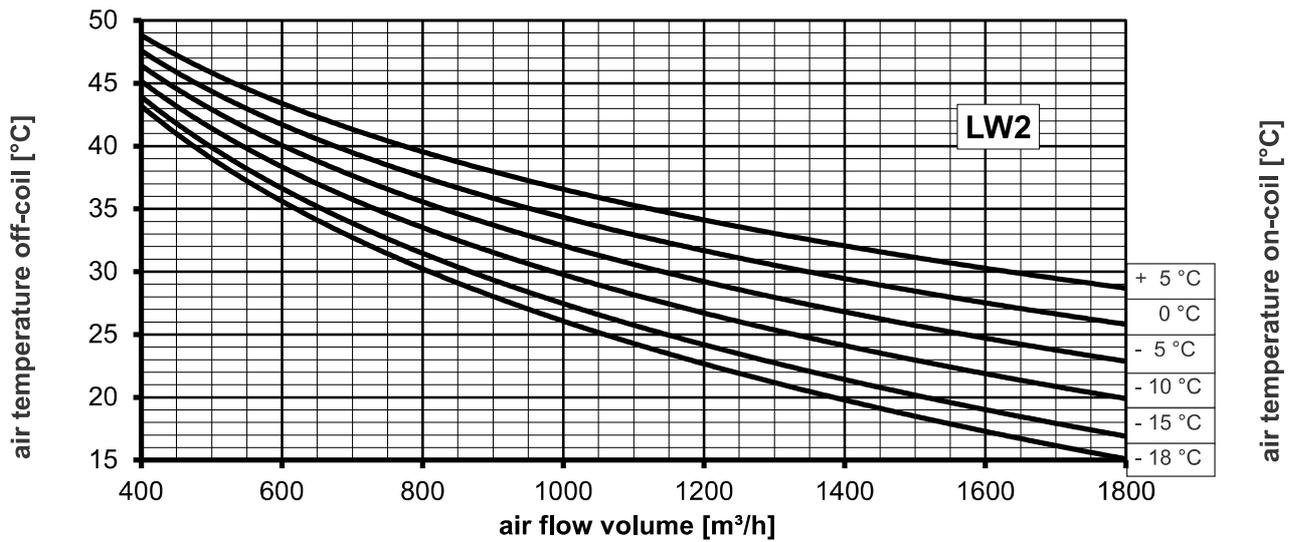

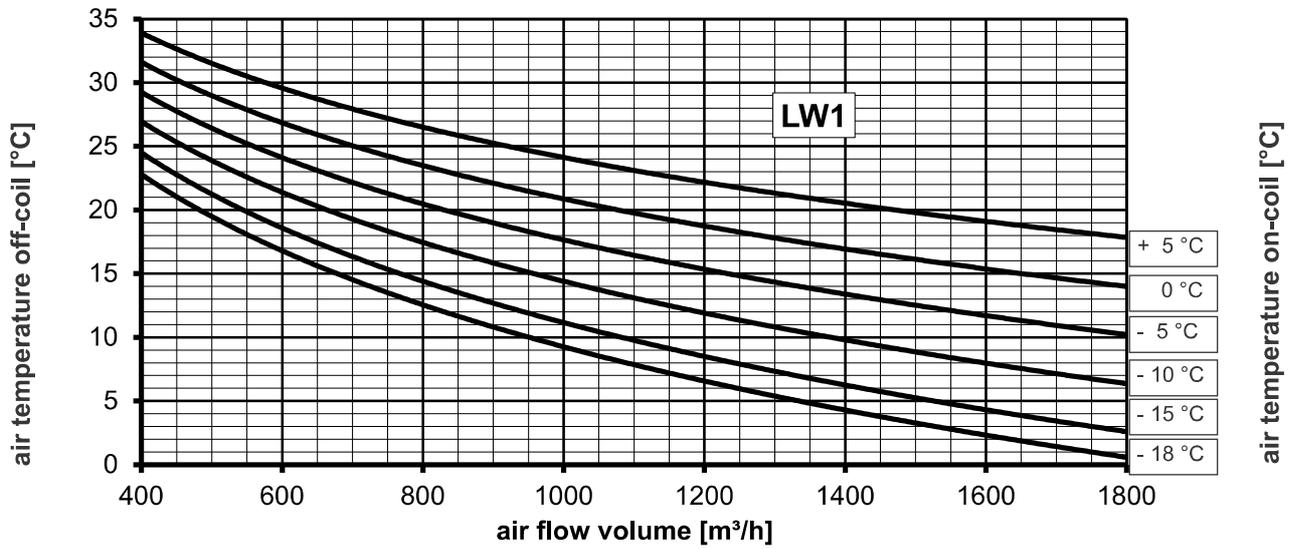

Heating performance for water temperature on-/off-coil 70/50°C

Flat Series
Size: 2

Air Heater Unit LW
 for medium pump circulated water

Heating performance for water temperature on-/off-coil 80/60°C

Flat Series

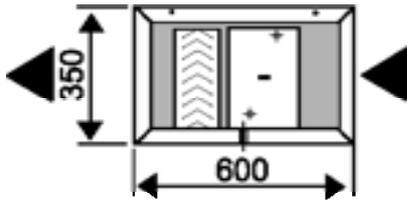

Size: 2, Module depth 750 mm

The unit sides marked by arrow are open!

Air Cooler Units LK

for cooling medium chilled water KKW

Water temperature on-/off-coil 6/10 or 6/12, without glykol

The required amount of water can be calculated with the formula:

$$\dot{V}_w [\text{m}^3/\text{h}] = (\dot{Q}_h \times 3600) / (\Delta t_w \times c_w \times \rho_w)$$

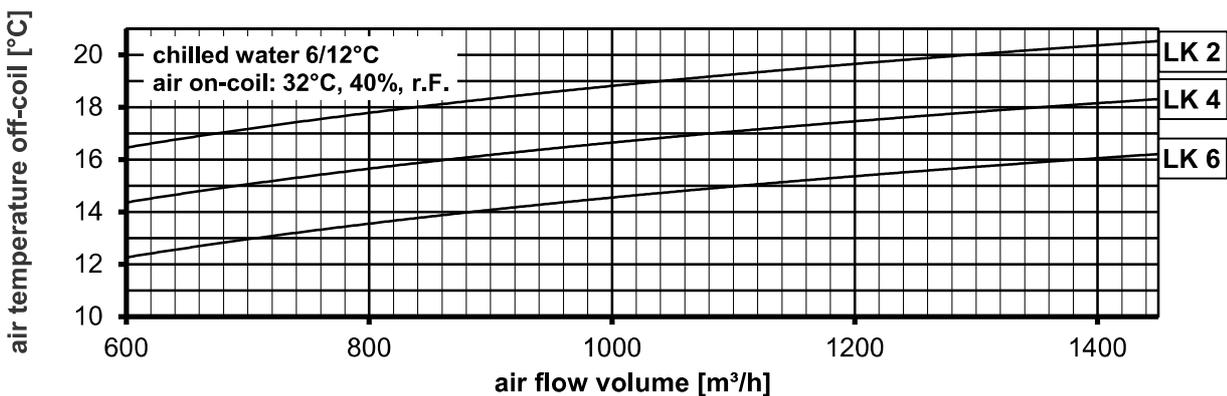

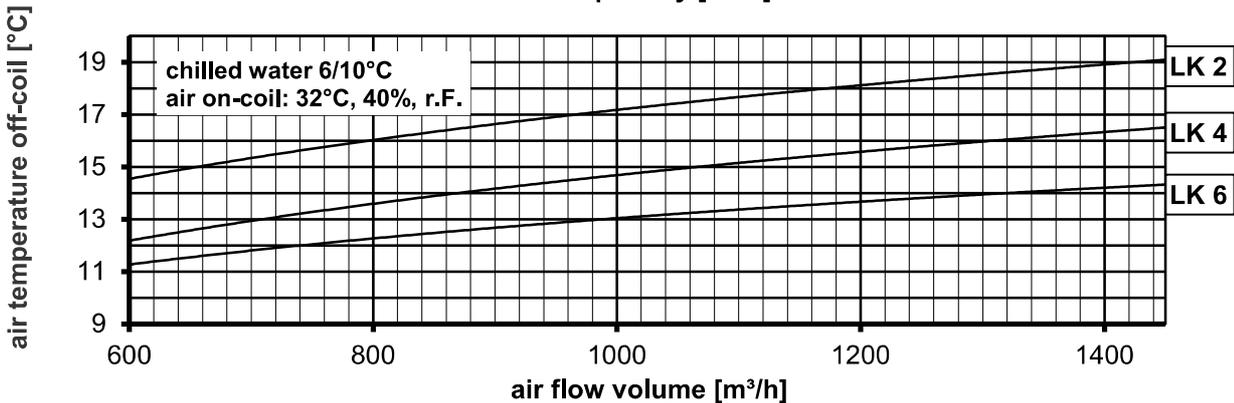

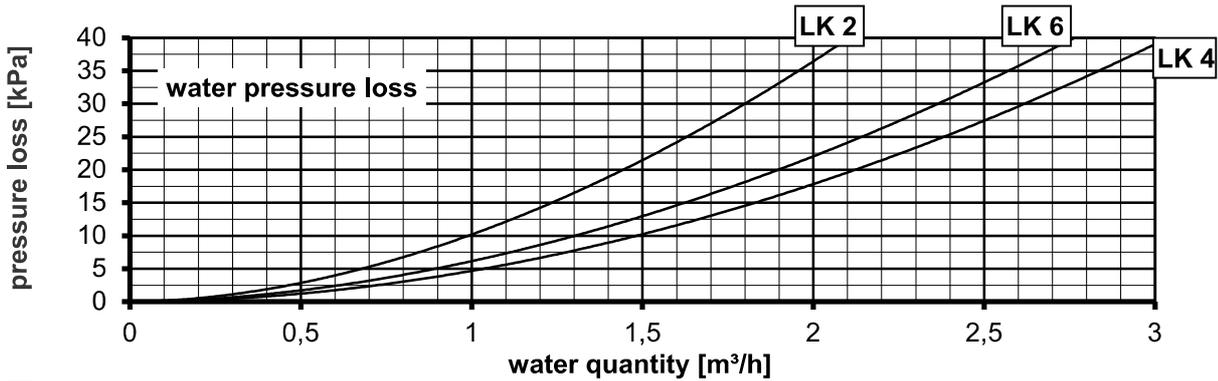

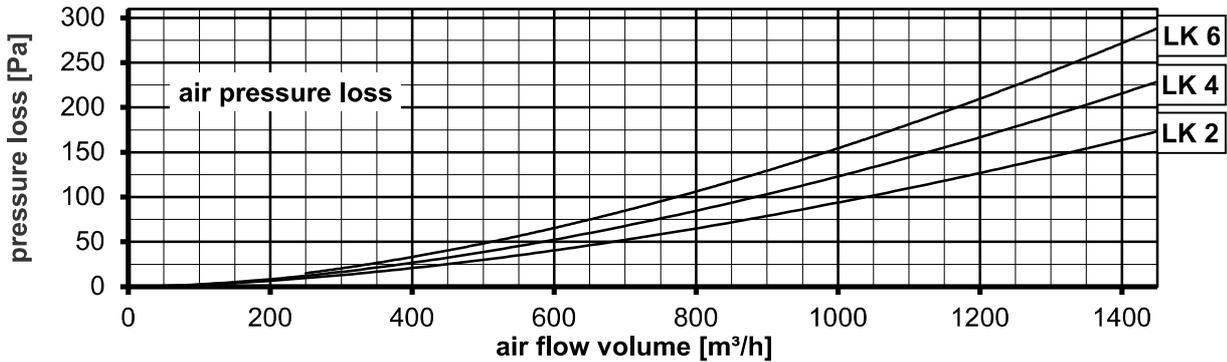

\dot{Q}_h = cooling performance [KW]

\dot{V}_w = quantity of water [m³/h]

Δt_w = water temperature difference [Kelvin] (4K at 6/10 or 6K at 6/12)

ρ_w = specific weight of water = 1000 [kg/m³]

c_w = specific heat capacity of water = 4,19 kJ/kg K

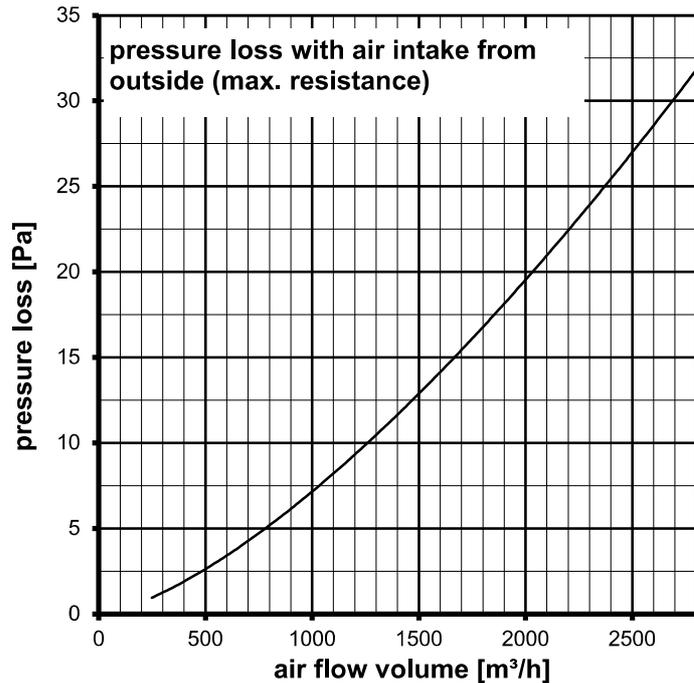

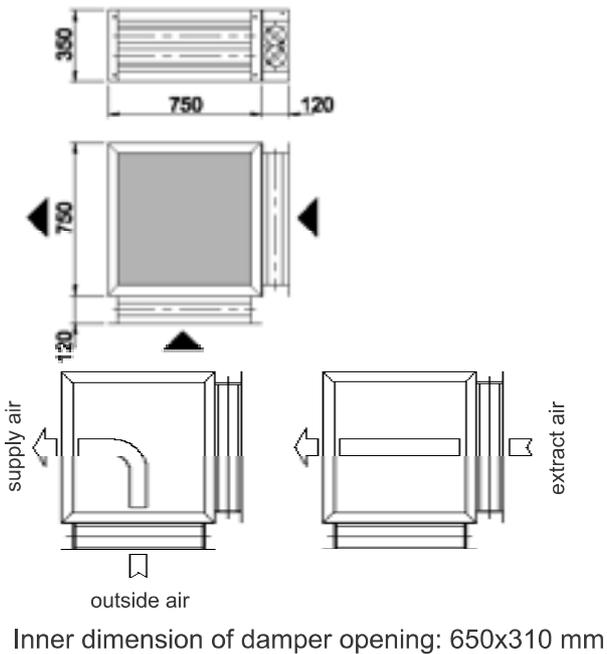

Flat Series

Size: 2, Module depth 750 mm

The unit sides marked by arrow are open!

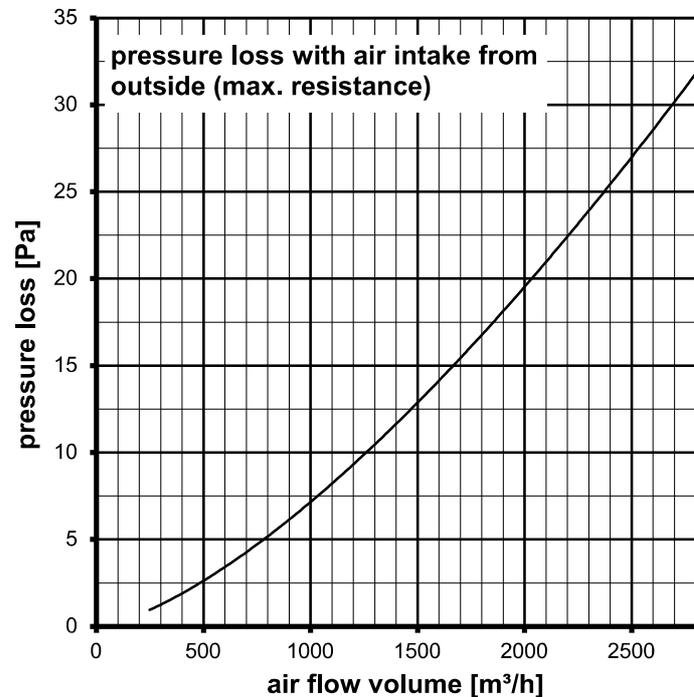

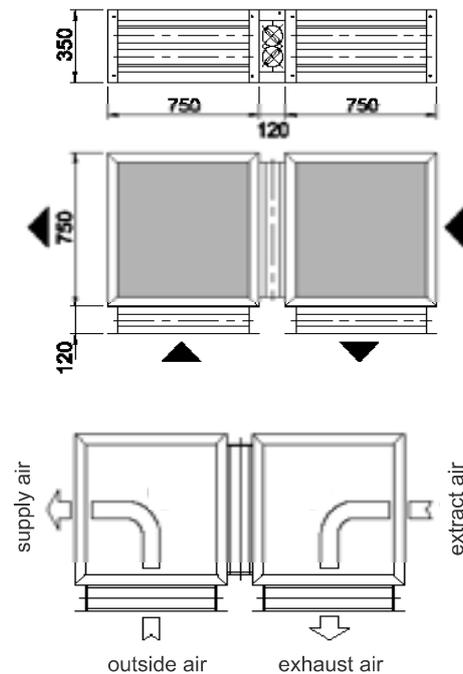

Air Mixer Unit LM

for AHU with supply and extract air arranged on top of each other

Air Mixer Unit CLM

for AHU with supply and extract air arranged in row

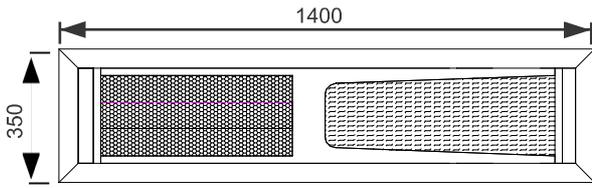

Note for units type LM and CLM:

Pressure loss of Air Mixing Units is calculated on base „free air“. That means, for connected duct of same cross section no additional dynamical intake losses have to be considered.

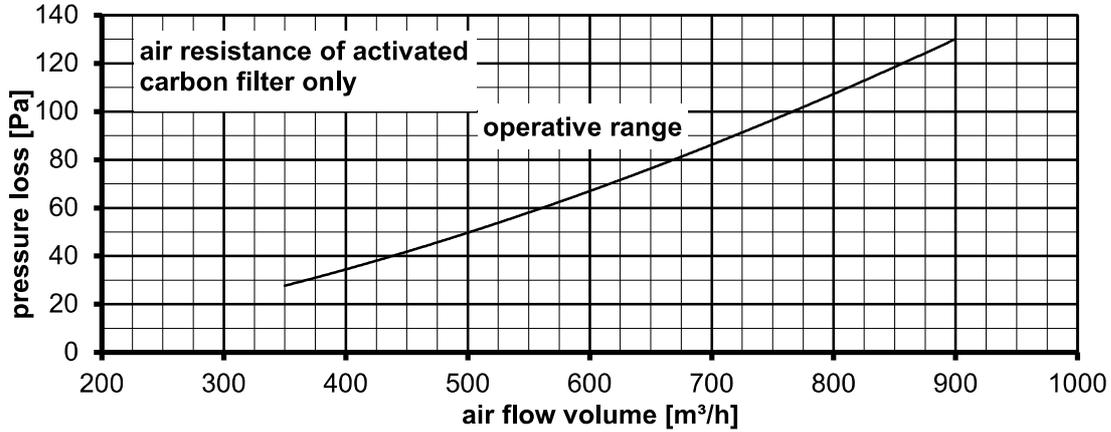

In case of pressure side connection with a ventilator unit the resulting pressure regain is bigger than the pressure loss. Therefore, no statical pressure loss needs to be considered.

Flat Series
Size: 2, Module depth 750 mm

Combinated Activated Carbon Filter Unit AKCF
 for elimination of dust and undesirable odours

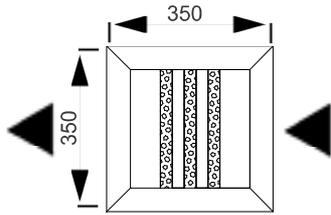

equipped with:
 1. Activated carbon filter with 6 filter cartridges (bayonet fixing)
 2. Pocket filter, quality class F7 (EU7), length 600mm
 Total air resistance of combinated filter unit is a sum of pressure drops of the filter steps 1 and 2.
 Therefore, the pressure loss of filter EU7 has to be added separately to below values for activated carbon filter (to be found in diagram for the respective filter module).

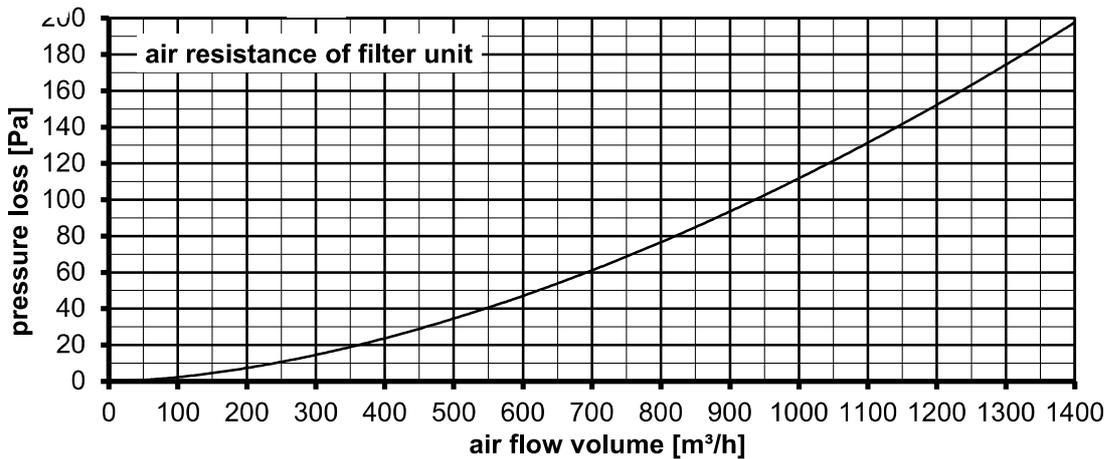

The unit sides marked by arrow are open!

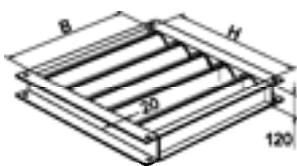

Coarse Filter Unit GF

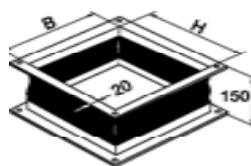

equipped with:
 3 Filter steps:
 2 Metal mat work filter and
 1 Fibre mat filter with an exchange frame
 (regularly cleaning required)

Dampers and Flexible Connections

Damper type „A“: for total cross section unit 650 mm width (B) x 310 mm height (H)

Flexible Connection: to be used for outlet- and inlet side type „A“: 650 mm width (B) x 310 mm height (H) for total cross section of unit.

Flat Series
